MORE MOMENTS OF GREATNESS

20+ peer reviewed research studies discuss the benefits of stroboscopic training

WHAT IS STROBOSCOPIC TRAINING?

The VIMA REVs incorporate stroboscopic lenses to strengthen the connection between the eyes, brain, and body. The lenses flicker and transition from transparent to opaque, forcing an athlete to be a more efficient decision-maker with limited information provided.

Product Features:
- Stroboscopic lenses transition from clear to opaque
- Robust, lightweight sport frame
- Impact-rated lenses and frame
- Bayonet temples for Tactical
- Adjustable strap for Sport and Tactical
- Mobile app on iOS and Android devices for remote control
- 2-digit Vision Quotient (VQ) LCD display with 11 strobe rates can be tailored to specific training drills.
- Mode sequencing is optimized for Sport or Tactical users, allowing for training of both eyes together, each eye separately, or in alternation
- Rechargeable battery with 6-8 hour life
