What is the Internet of Things (IoT)?

According to Amazon Web Services, "The term IoT, or Internet of Things, refers to the collective network of connected devices and the technology that facilitates communication between devices and the cloud, as well as between the devices themselves."

Wearables, like smartwatches and fitbits that connect to other devices to share data, are the most common examples of Internet of Things devices used today. In both cases, they also connect to the internet to track GPS locations. Other examples of devices using IoT technology include: smart home applications like doorbells, and personal assistant apps like Alexa or Siri, which use both facial and voice recognition technology.

Internet of Things Training Opportunities

National Internet of Things (IoT) Investigative Conference
January 16-18, 2024 | Las Vegas, NV

NW3C

The National White Collar Crime Center (NW3C) and National Criminal Justice Training Center of Fox Valley Technical College (NCJTC) are pleased to announce their partnership in hosting the National Internet of Things (IoT) Investigative Conference, taking place from January 16-18, 2024, in Las Vegas, Nevada. This groundbreaking event will bring together law enforcement professionals, industry leaders, and experts to explore the growing impact of IoT technology on criminal investigations and community safety.

IoT devices have become ubiquitous in our modern world, constantly monitoring, recording, and sensing the environment around them. The wealth of data generated by these devices offers invaluable resources for solving crimes, placing individuals at crime scenes, establishing timelines, and corroborating or refuting statements made by suspects. With the rapid growth of IoT technology, it is essential for law enforcement and investigative professionals to stay informed and well-equipped to utilize this valuable resource effectively.

The National IoT Investigative Conference promises to be an essential gathering for professionals seeking to navigate the complex landscape of IoT in criminal investigations.

FVTC's National Criminal Justice Training Center secures funds for renowned crime-fighting training

Fox Valley Technical College's National Criminal Justice Training Center recently received over $15 million in Department of Justice grants to fund its nationally recognized crime-fighting training. The training center — which got its start 30 years ago — serves as a hub for criminal justice training for local law enforcement, prosecutors and advocacy groups, training around 95,000 people a year across every U.S. state and territory.

"If you ask any police department in the country if they've heard of Fox Valley Technical College in Appleton, the vast majority would say 'yes' because they've been to our training," the center's Executive Director Brad Russ said.
